40GBASE-SR4 a 100GBASE-SR10

Table 86–9—40GBASE-SR4 or 100GBASE-SR10 illustrative link power budgets

Parameter	OM3	OM4	Unit
Effective modal bandwidth at 850 nm ^a	2000	4700	MHz•km
Power budget (for maximum TDP)	8.3		dB
Operating distance	0.5 to 100	0.5 to 150	m
Channel insertion loss ^b	1.9	1.5	dB
Allocation for penalties (for maximum TDP) ^c	6.4	6.5	dB
Unallocated margin	0	0.3 ^d	dB
Additional insertion loss allowed	0		dB

^a Per IEC 60793-2-10.

^b The channel insertion loss is calculated using the maximum distances specified in Table 86–2 and cabled optical fiber attenuation of 3.5 dB/km at 850 nm plus an allocation for connection and splice loss given in 86.10.2.2.1.

^c Link penalties are used for link budget calculations. They are not requirements and are not meant to be tested.

^d This unallocated margin is not available for use.

100GBASE-SR4

- 4 vlákna v každém směru
- 25,78125 GBd

Table 95–8—100GBASE-SR4 illustrative link power budget

Parameter	OM3	OM4	Unit
Effective modal bandwidth at 850 nm ^a	2000	4700	MHz.km
Power budget (for max TDEC)	8.2		dB
Operating distance	0.5 to 70	0.5 to 100	m
Channel insertion loss ^b	1.8	1.9	dB
Allocation for penalties ^c (for max TDEC)	6.3		dB
Additional insertion loss allowed	0.1	0	dB

^aPer IEC 60793-2-10.

^bThe channel insertion loss is calculated using the maximum distance specified in Table 95–5 and cabled optical fiber attenuation of 3.5 dB/km at 850 nm plus an allocation for connection and splice loss given in 95.11.2.1.

^cLink penalties are used for link budget calculations. They are not requirements and are not meant to be tested.

50/125	OM4	A1a.3	492AAAD	---
Std SM	OS1	B1.1	492CAAA	G.652.A or B
Low Water Peak SM	OS2 ⁽⁵⁾	B1.3	492CAAB	G.652.C or D

⁽¹⁾ OM1 is typically 62.5μm, but can also be 50μm

⁽²⁾ OM2 is typically 50μm, but can also be 62.5μm

⁽⁵⁾ OS2 is referenced in the standard ISO/IEC 24702 "Generic Cabling for Industrial Premises"

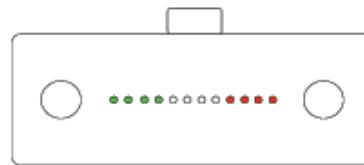

Nový standard MM vlákna – OM5

- **WBMMF (WideBand MultiMode Fiber) – vlákno pro WDM**
- **Dne 5. října 2016 bylo rozhodnuto komisí ISO/IEC tento typ vlákna označovat jako OM5.**
 - “The standard specifies 50/125-micron laser-optimized fiber that is optimized for enhanced performance for single-wavelength or multi-wavelength transmission systems with wavelengths in the vicinity of 850nm to 950nm. The actual operating band is from 850 to 953nm. The effective modal bandwidth for this new fiber is specified at the lower and upper wavelengths: 4700 MHz.km at 850nm and 2470 MHz.km at 953nm.”
 - OM5 fiber specifications are already published by the Telecommunications Industry Association as [TIA-492AAAE](#), and are in late-stage ballot within the IEC to be published as IEC 60793-2-10 edition 6.

MPO/MTP konektory pro 40/100GE

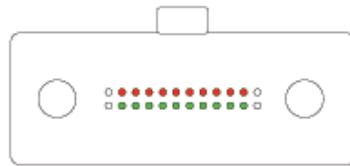

40GBASE-SR4
100GBASE-SR4

Left 4 pins are Tx
Right 4 pins are Rx
(inner 4 pins unused)

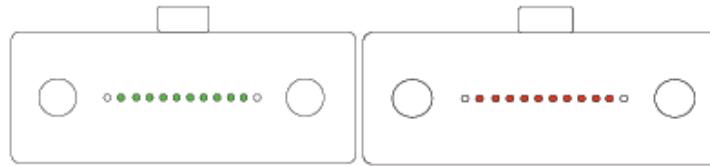

100GBASE-SR10

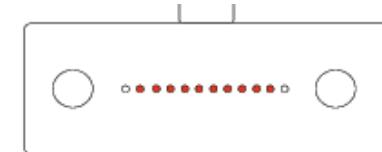

Inner 10 pins, Top Row are Rx
Inner 10 pins, Bot Row are Tx
(outermost pins both rows unused)

Option A
(recommended)

Inner 10 pins, Left Side are Tx
Inner 10 pins, Right Side are Rx
(outermost pins each side unused)

Option B

Inner 10 pins, Top are Rx
Inner 10 pins, Bot are Tx
(outermost pins Top & Bot unused)

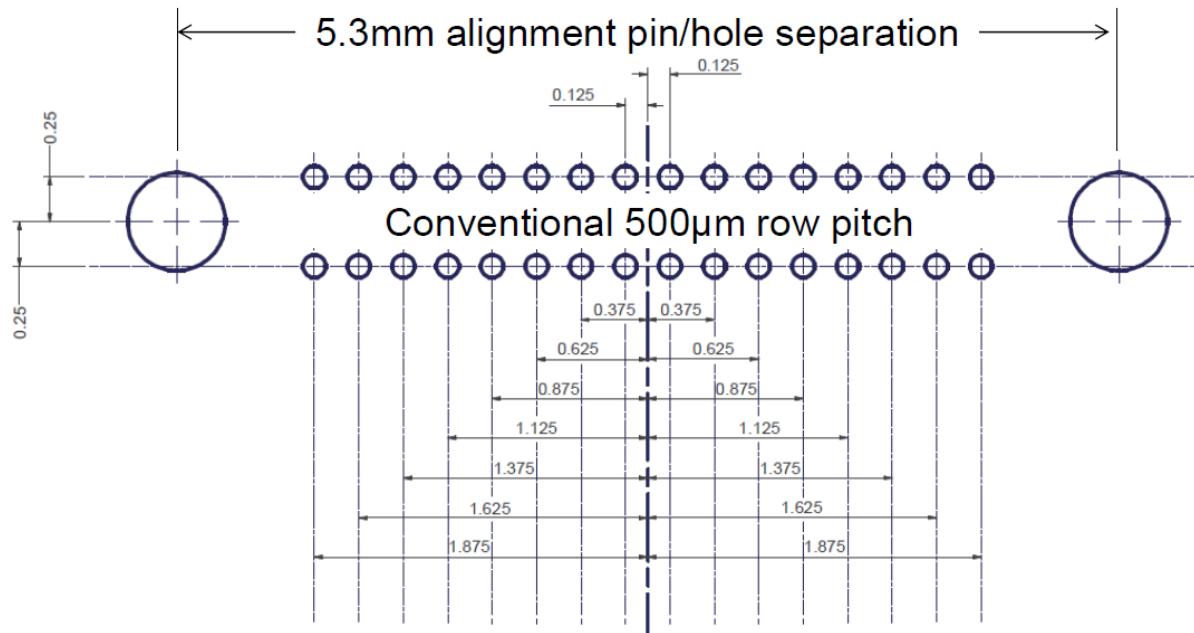

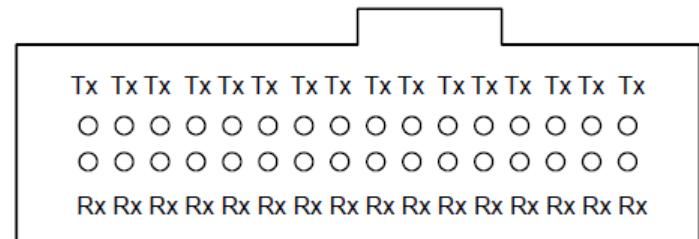

Option C

Konektor pro 400GBASE-SR16

- MPO-16 konektor ANSI/TIA-604-18
- Konektor MPO/MTP 2x 16 vláken

MPO/MTP® konektor

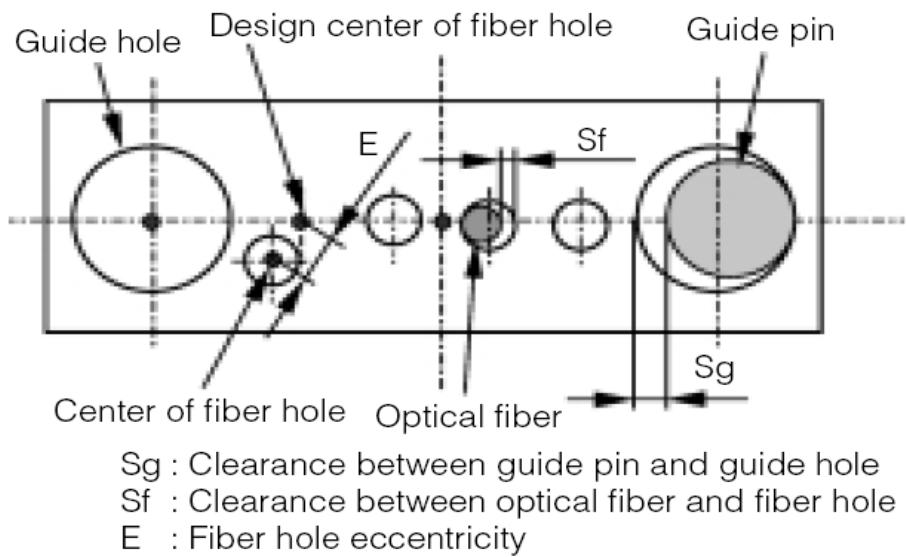

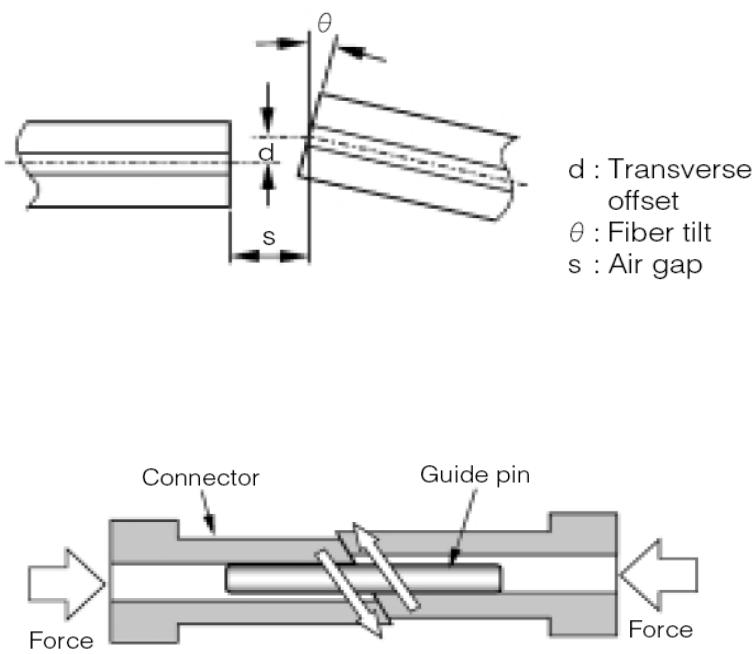

- MPO konektor je „ Multi-fiber Push On connector“
- IEC-61754-7
 - Fibre optic interconnecting devices and passive components - Fibre optic connector interfaces - Part 7: Type MPO connector family
- TIA-604-5-D (FOCIS 5)
 - Fiber Optic Connector Intermateability Standard , Type MPO.
- Obdélníková ferule – plast, vystředění pomocí trnů (Samec/Samice)
- MTP® je registrovaná značka firmy US Conec
- MTP® konektor je kompatibilní s konektorem MPO
 - Vylepšené vedení MT ferule, Oválná pružina, Vyměnitelný klíč
 - Možnost změny Samec-Samice, Přesnější navedení středících trnů, eliptický tvar špičky

MPO / MTP optický konektor

Polarita zapojení MPO konektorů

- Definováno TIA-568-C
- Metoda A
 - Páteřní kabel zapojen A-A Key Up – Key Down (pin 1 = pin 1)
 - Spojka typ A (Key Up – Key Down)
 - Patchkordy na koncích linky – jeden A-A, druhý A-B
- Metoda B
 - Páteřní kabel křížený = zapojen A-B Key Up – Key Up (pin 1 = pin 12)
 - Spojka typ B (Key Up – Key Up)
 - Patchkordy na koncích linky – oba A-B
 - Není možné použít SM APC konektory
- Metoda C
 - Páteřní kabel křížené páry = zapojen A-A Key Up – Key Down (pin 1 = pin 2)
 - Spojka typ A (Key Up – Key Down)
 - Patchkordy na koncích linky – oba A-B

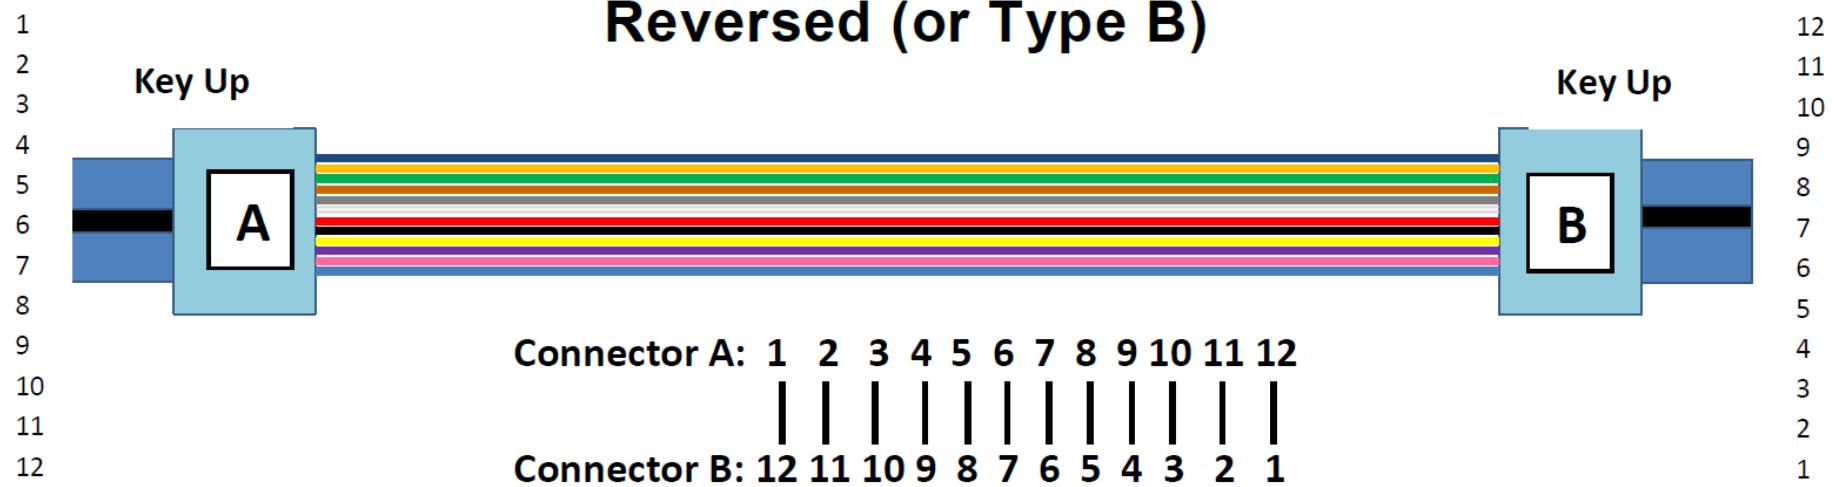

Kabel MPO typ A (A-A)

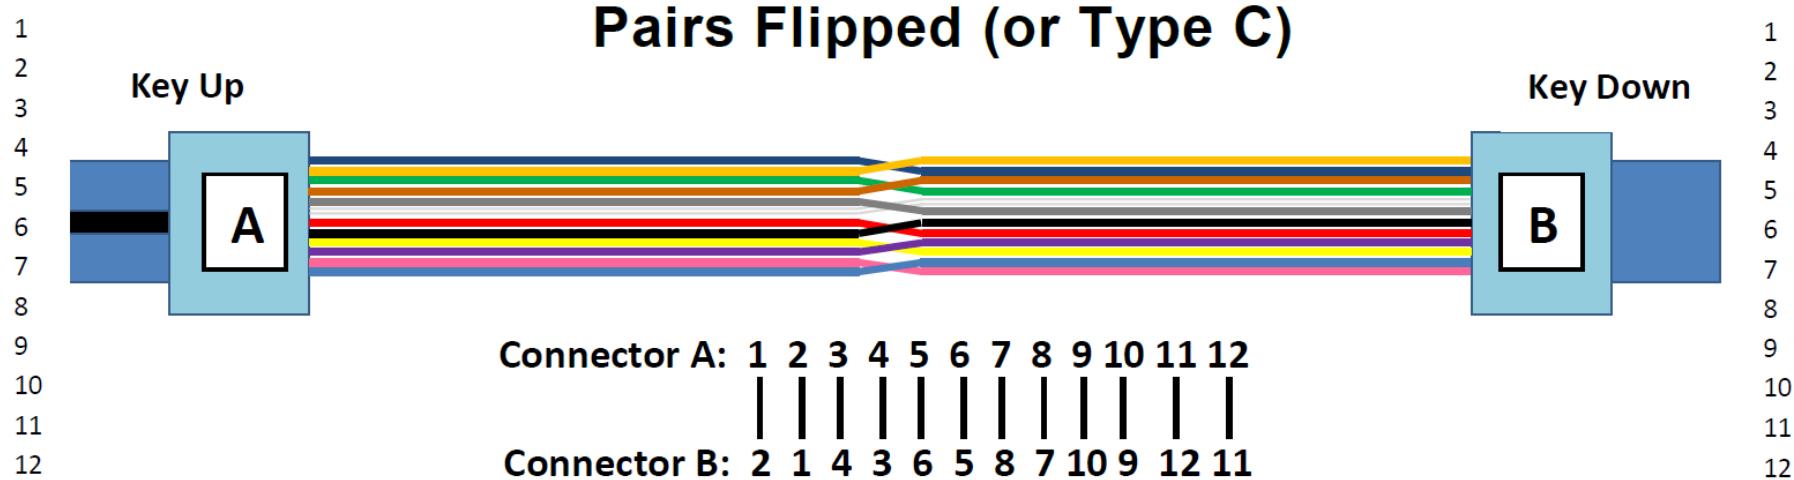

Straight (or Type A)

Kabel MPO typ B (A-B)

Kabel MPO typ C
